

# FIFA World Cup Chatbot

Aymane, Pascal, Jasmina, Lukas

# Agenda

1. Motivation
2. Recherche
3. Datengrundlage
4. Funktionsweise Chatbot
5. NLP – Pipeline
6. Fazit und Ausblick

# Motivation

- Fußball = Volkssportart
- FIFA WM

# Datengrundlage

## Daten für Antwort

- API
- Kosten
- Datengrundlage schlecht
- Keine API für den Anwendungsfall
- Kaggle Dataset

## Trainingsdaten

	query	category
0	Which team became 6th place in 2006?	PlacementTeam
1	Which team was world champion in the year 2010?	PlacementTeam
2	Who won in 1990?	PlacementTeam
3	Who was the winner in 1934?	PlacementTeam
4	Who became the world champion in 1938?	PlacementTeam
...	...	...
66	Who won the world cup in 1974?	firstPlace
67	Who was world-champion in 1950?	firstPlace
68	Who got the first place of the world cup in 2002?	firstPlace
69	Who was the winner of the world-championship i...	firstPlace
70	Who was the champion of the worldcup in 2010?	firstPlace

# Funktionsweise

- Chatbot in JavaScript  
→ Frage weiterleiten (JSON)
- Flask-App triggert NLP-Pipeline  
→ Abfragen aus CSV-Files
- Antwort als JSON-File,  
Darstellung im Frontend
- Error-Handling

# NLP Pipeline

Pre-  
Processing

Vectorization

Intent  
Detection

Named  
Entity  
Recognition

# Pre-Processing Beispiel

“Who was the winner of the World Cup in 1974?”

```
1 input_data = ["Who was the winner of the World Cup in 1974?"]
2 # cleaning the input data
3 cleanup = cleanup_text(input_data, logging=True)
4 cleanup[0]
```

✓ 0.2s

'winner world cup 1974'

# Vectorization & Intent Detection

- grundlegende Funktionsweise
- Umsetzung
  - Word2Vec
  - tf-idf
  - Support Vector Classifier

# Intent Detection - Step-by-Step Example

1. “Who was the winner of the World Cup in 1974?”

```
1 intent_categories = list(Encoder.classes_)
2 intent_categories
```

✓ 0.5s

```
['PlacementTeam',
 'TeamPlacement',
 'YearHost',
 'firstPlace',
 'year(avg)Goals',
 'yearGoals',
 'yearMatches']
```

# Intent Detection - Step-by-Step Example

2.

```
1 # converting the cleaned data to vector
2 cleanup_vec = np.zeros((1, len(vectorizer.get_feature_names())), dtype="float32")
3 for i in range(len(cleanup)):
4     cleanup_vec[i] = create_average_vec(cleanup[i])
5
6 print("Train word vector shape:", train_cleaned_vec.shape)
```

✓ 0.1s

Train word vector shape: (71, 88)

# Intent Detection - Step-by-Step Example

3.

```
1 grid.decision_function([cleanup_vec[0]])
```

✓ 0.4s

```
array([[ 2.8382815 ,  0.75169329,  5.27404157,  6.29559985, -0.28339648,  
        2.78789648,  2.82038755]])
```

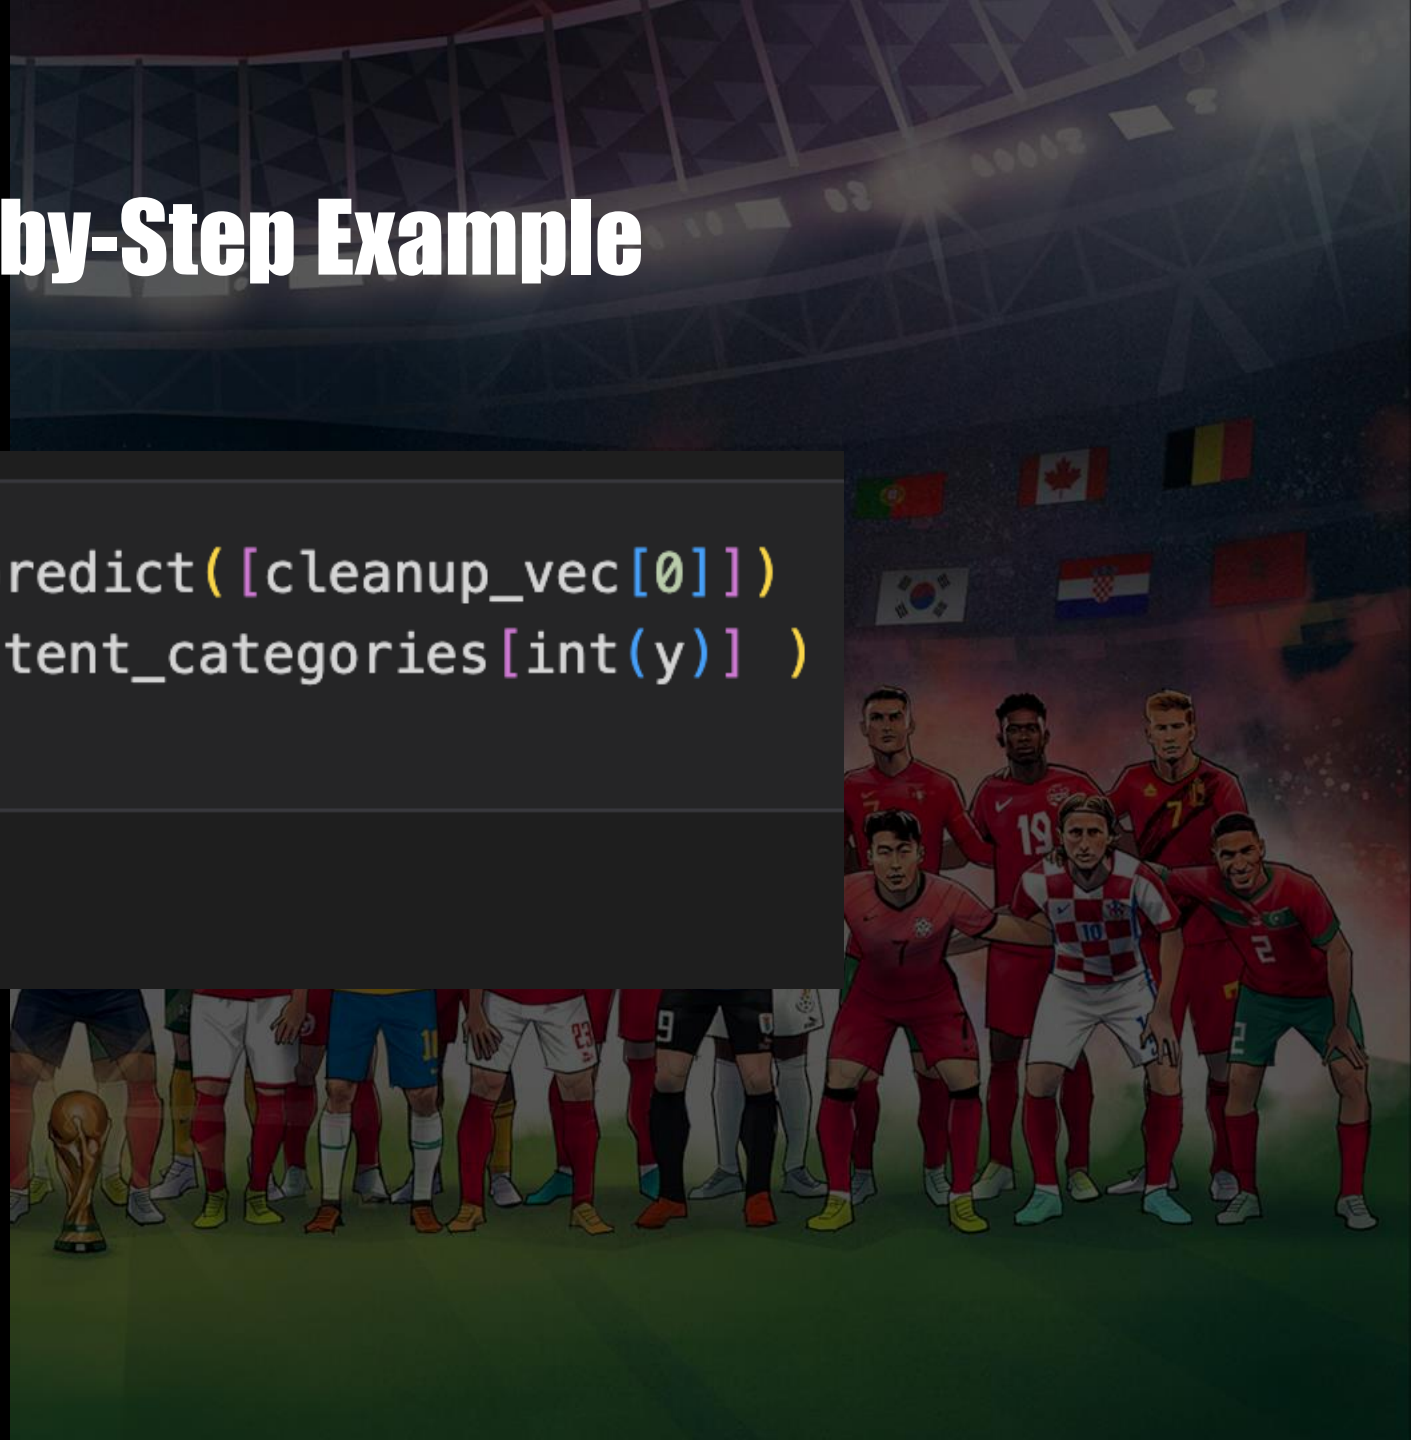

# Intent Detection - Step-by-Step Example

4.

```
1 y = grid.predict([cleanup_vec[0]])  
2 print(y,intent_categories[int(y)] )
```

✓ 0.3s

[3] firstPlace

# Named Entity Recognition

- SpaCy
- Entities: GPE, Date, Ordinal
- Numerizer
- Generierung von Antworten

# Hands On

## Demo des Chatbots

# Fazit

- Antworten auf verschiedene Fragevarianten
- Erkennen allgemeiner - und Sportfragen-Intents

## Anzahl Trainingsdaten: 90

# Anzahl Testdaten: 20

# Accuracy: 80%

# Ausblick

- Modellgenauigkeit
- Training weiterer Modelle
- Nachfragen an User
- API Anbindung
- Speech-to-Text
- Mobile Application

Wenn der Chatbot weiß,

dass du erster geworden bist.
